

**Keynote Address by:  
Dr. Walter Dorn,  
Author of Keeping Watch**

The goal of the forum is to increase awareness of peacekeeping technologies and how they are being used in practice. While much attention has been given to providing the UN with helicopters and unmanned aerial vehicles (UAVs), Dr. Dorn emphasizes the importance of basic tools such as smart phones, night vision goggles, video surveillance, and tethered balloons. The forum will include two panels of experts to explore how the UN and African militaries might go about pilot projects to make use of these innovations.

**Wednesday, May 29, 2013**

**Time: 10:00am-12:00pm**

**National Defense University  
Lincoln Hall Room 3305  
Ft. McNair, Washington, D.C.**

# Peacekeeping Technology for the Protection of Civilians

## KEEPING WATCH

Monitoring, Technology & Innovation  
in UN Peace Operations
